WHITE LOTUS GROUP, BENGALURU

A PROJECT MANAGEMENT COMPANION

Chanakya

A considered space for the planning, coordination and quiet stewardship of every villa we build.

TEAM TRAINING GUIDE

EDITION ONE, 2026

WELCOME

An Introduction

Chanakya is our home for the work of building homes. It holds every villa's schedule, progress, dependencies and decisions in one calm, shared place, so that the craft of construction can proceed with clarity.

This guide will carry you through your first thirty minutes in the tool. Read it once, return to it when needed, and keep the cheat sheet at the back within reach. The experience is intended to be quiet, precise and trustworthy, much like the homes it helps us create.

CONTENTS

I	Signing in	p. 3
II	Your first minutes in the app	p. 4
III	The villa dashboard at a glance	p. 5
IV	Common tasks, step by step	p. 6
V	Who can do what	p. 8
VI	Working together	p. 9
VII	Troubleshooting	p. 10
VIII	Known limitations and support	p. 11
IX	A daily cheat sheet	p. 12

CHAPTER I

Signing in

Two doors lead into the same room. The Google door is preferred, being the faster and more secure of the two.

Option A, with Google

1. Open `chanakya-pm.onrender.com`
2. Click **Sign in with Google**
3. Choose your `@whitelotusgroup.in` account

For anyone from the White Lotus domain, the first sign-in quietly creates an account with *edit* permission. If your work calls for approving or managing, let Vandana know and she will elevate you.

Option B, with email and password

1. Enter your work email
2. Enter the shared default password, if one has been given to you
3. Click **Sign In**

A self-service password reset is not yet built. If you have forgotten yours, please write to Vandana.

> A NOTE ON SESSIONS
>
> You remain signed in for seven days. Fifteen minutes before your session expires, a gentle banner will appear so you may finish your edit and sign in again without losing work.

CHAPTER II

Your first minutes

After signing in, you will find yourself on the **Select Development** screen. Two principal developments live here, Amanvana and Kandhavara, alongside any test or draft developments that may exist.

1. Click **Open Dashboard** on the development you work with
2. Or click **View All Developments** to see everything at once
3. Inside, a grid of villa cards awaits. Click any villa to enter its dashboard.

> FINDING YOUR WAY BACK
>
> The small badge beside the Chanakya wordmark, top-left, remembers which development you are inside. Click it at any time to return to the Select Development screen.

CHAPTER III

The villa dashboard

Inside a villa, the work is gathered into tabs. Each answers a single question.

TAB	WHAT IT SHOWS
WBS	The full task table, grouped by phase and subphase
Gantt	A visual timeline, with dependencies and critical path
Report	Daily, weekly and monthly progress reports
Planner	Week by week assignment of tasks
Baselines	Snapshots of the schedule, preserved for comparison
Critical Path	The tasks that determine the project end date
Calendar	Tasks plotted on a calendar grid
Resources	Team and material allocation
Costs	Budget against actual
Approvals	Items awaiting a considered sign-off

Along the left, every villa in the development is listed. Click a villa name to move between them without returning to the dashboard.

CHAPTER IV

Common tasks, step by step

Add a new task

Requires: edit permission

1. Open a villa and choose the **WBS** tab
2. Click **+ Add Task**, at the top-right of the toolbar
3. Choose whether this is a group task or a subtask
4. Fill in name, dates, phase, status, progress
5. Optionally, add predecessors, assignee, cost or notes
6. Click **Save**

Your task reaches the server within a second and a half. Teammates will see it on their next refresh, or sooner as they continue to work.

Edit a task

1. Click the task row in the WBS tab, opening the side panel
2. Edit any field, the change saves automatically
3. Or click the task name to open the full edit modal

From the Gantt: drag a task bar, left or right, to shift its dates while preserving duration. A toast confirms the new dates with an *Undo* option.

Mark a task as complete, in progress, or blocked

1. Click the task
2. Choose a new value from the **Status** dropdown
3. If the status becomes *blocked* or *on hold*, a Blocking reason field appears; please fill it in so the reason travels with the task

Delete a task

1. Click the task, then **Delete**
2. A toast appears with an *Undo* option, visible for six seconds
3. After six seconds the deletion is permanent

Import a CSV or Excel file of tasks

Requires: manage permission

1. Click **Import**, top-right
2. Choose *By Phase*, *By Villa*, or *WL Master Schedule* mode
3. Upload the file, then map columns if prompted
4. Preview and confirm

Export data

Requires: manage permission

Click **Export**, top-right. A JSON backup file downloads. Every export is recorded in the audit trail.

Capture a baseline

Requires: edit or manage permission

1. Open a villa and choose the **Baselines** tab
2. Click **Capture New Baseline**
3. Give it a considered name such as "Initial Schedule" or "Revised Plan v2"
4. Optionally note what changed
5. Click **Save**

Approvals

Any user may *request* an approval from a task's panel. Those with the *approve* permission, Pavan, Chetan and Vandana, will see pending items under the Approvals tab, where each can be approved or declined with a comment.

View the audit log

Requires: manage permission

Click the **Audit Log** button in the header. The last five hundred actions are visible, with author, timestamp and what changed.

CHAPTER V

Who can do what

PERMISSION	WHAT IT UNLOCKS
view	Read every villa, task and report. No buttons for editing are shown.
edit	Add, edit and delete tasks. Drag Gantt bars. Update progress.
approve	See Approvals. Approve or decline requests with a comment.
manage	Create villas, Import, Export, Add Development, Audit Log, Manage panel.

The four are independent. A user may hold any combination.

The current roster

NAME	ROLE	PERMISSIONS
Admin	Administrator	all
Vandana P	Project Manager	edit, approve, manage
Praveer C	Planner	edit, manage
Vaishali P	Project Manager	edit, manage
Shraddha B	Project Manager	edit, manage
Dinesh	Project Manager	edit, manage
Madhavarajan S	Project Manager	manage
Pavan	Project Manager	approve
Chetan	Project Manager	approve
Stanly John	Project Manager	view
Product Analyst	Analyst	view

Anyone else signing in from the White Lotus domain receives *edit* by default. Please write to Vandana for elevated access.

Working together

Auto-save and conflicts

Every change auto-saves every one and a half seconds. Teammates will see your work on their next refresh, or as they themselves continue to edit. When two people save the same villa at nearly the same moment, the second saver sees a banner, *"Another user saved changes after you last synced"*. Clicking **Reload** brings in the latest state; your unsaved change will need to be redone, but nothing is ever silently lost.

If the network falters

A yellow banner appears when saves begin to fail. The application retries every five seconds on its own. After thirty seconds of continued failure, the banner turns red and asks you to stop editing until the connection returns. You may click **Retry now** to force an attempt, or **Reload** to begin afresh.

What is quietly logged

Each create, edit, delete, reschedule, import, export and approval travels into the audit trail with your name and a timestamp. Administrators can review the log at any time.

CHAPTER VII

When something feels off

IF YOU SEE	PLEASE DO
Cannot sign in	Confirm the URL, try the Google button, then write to Vandana.
Chanakya couldn't finish loading screen	Click **Reload app**. If it persists, send Vandana a screenshot.
Raw code or broken layout	Hard reload. On Mac, press Cmd + Shift + R. On Windows, Ctrl + Shift + R.
"Another user saved" appears often	Reload, then re-enter your change. If this recurs, coordinate with the other editor before continuing.
No Manage, Import or Add Villa button	Your account does not hold *manage*. Please write to Vandana.
Gantt feels slow	Switch the zoom from Week to Month or Quarter; fewer columns renders faster.
Accidental deletion	Use the **Undo** on the toast, within six seconds. Beyond that, ask Vandana to restore from the audit log.

CHAPTER VIII

Known limitations and support

Not yet built

- Mobile and tablet layouts. Chanakya is desktop and laptop only for now.
- Self-service password reset. For the moment, please write to Vandana.
- Photo and document attachments on tasks. Use the shared drive or email in the interim.
- Instant live updates. You see others' changes on reload or next save.
- Bulk task editing. One task at a time, except for Gantt drag for date shifts.

Escalation

CONCERN	PLEASE CONTACT
Unable to sign in	Vandana P
Need edit, approve or manage permission	Vandana P
Found something that looks like a bug	Vandana P, with a screenshot and the browser console contents
Lost data or accidental deletion	Vandana P
Feature suggestion	Vandana P

CHAPTER IX

A daily cheat sheet

Keep this page near you. It covers the greater part of daily use.

Chanakya, at a glance

Sign in	chanakya-pm.onrender.com, Google button
Choose development	Amanvana, Kandhavara, or View All
Switch development	Click the badge next to the Chanakya wordmark
Add task	Villa, WBS tab, + Add Task
Edit task	Click row, edit fields, auto-save
Reschedule	Gantt tab, drag the bar
Undo delete	Click Undo on the toast within six seconds
Sign out	Top-right, Sign out
Conflict banner	Click Reload, then re-enter the edit
Stuck	Hard reload, then write to Vandana

AN INVITATION

Build with quietness and care.

May Chanakya carry your plans with the same deliberate attention that goes into every White Lotus home. If something here could be clearer, or any part of the experience could be more considered, please say so. This tool grows with us.
