WHITE LOTUS GROUP · CONSTRUCTION PM

Chanakya Team Training Guide

Everything a White Lotus team member needs to get productive on Chanakya in the first 30 minutes — signing in, navigating, daily workflows, and feature reference.

Live at: chanakya-pm.onrender.com
For: White Lotus project managers, planners, and management
Admin contact: Vandana P · vandana.p@whitelotusgroup.in
Issued: April 2026

Contents

1. Signing in
2. First two minutes in the app
3. The villa dashboard at a glance
4. Common tasks — step by step
5. Who can do what (permission matrix)
6. Working together — conflicts, auto-save, audit trail
7. Keyboard and mouse shortcuts
8. Complete feature list
9. Troubleshooting
10. Known limitations
11. Support and escalation
12. Daily cheat sheet

1 Signing in

You have two ways to sign in. **Google is preferred** — it's the fastest and most secure.

Option A — Sign in with Google (recommended)

1. Open `https://chanakya-pm.onrender.com`
2. Click **Sign in with Google**
3. Pick your `@whitelotusgroup.in` work account
4. You're in.

First-time Google sign-in from `@whitelotusgroup.in` auto-creates an account with EDIT permission. Need elevated access? Ping Vandana.

Option B — Email and password

If your account was pre-seeded with a password:

1. Enter your work email

2. Enter the shared default password (ask Vandana)
3. Click **Sign In**

Forgot your password? Email Vandana. Self-reset isn't built in yet.

Session length

- You stay signed in for **7 days**
- A warning banner appears **15 minutes before** expiry so you can save and sign in again without losing work
- If the session expires mid-edit, you'll see "Your session has expired" and be returned to the login screen

2 First two minutes in the app

After signing in, you land on the **Select Development** screen.

- **Amanvana** and **Kandhavara** are the two main developments
- Click **Open Dashboard** → on the one you work with
- Or click **View All Developments** to see everything

Inside a development you'll see villa cards. Click any villa to open its dashboard.

> **Tip.** The badge next to the Chanakya logo (top-left) shows which development you're in. Click it to go back to the Select Development screen.

3 The villa dashboard at a glance

Once inside a villa, the interface is organised into tabs:

Tab	What it shows
WBS	The full task table — phases, subphases, and every task
Gantt	Visual timeline with bars, dependencies, critical path
Report	Daily / weekly / monthly progress reports
Planner	Week-by-week task planner
Baselines	Snapshots of schedule versions for comparison
Critical Path	The tasks that determine the project end date
Calendar	Tasks plotted on a calendar grid
Resources	Team and material allocation
Costs	Budget versus actual
Approvals	Items waiting for sign-off

The left sidebar lists all villas in the development — click any villa name to switch.

4 Common tasks — step by step

Add a new task

Requires **EDIT** *permission*

1. Open any villa → **WBS** tab
2. Click **+ Add Task** (top-right of the WBS toolbar)
3. Pick task type: group task or subtask
4. Fill in name, dates, phase, status, progress
5. Optionally add predecessors, assignee, cost, notes
6. Click **Save**

The task auto-saves to the server within 1.5 seconds. Other team members will see it on their next refresh.

Edit a task

1. Click the task row in the WBS tab
2. The task panel opens on the right
3. Edit any field → changes save automatically
4. Or click the task name to open the full edit modal

Quick edits from the Gantt:

- **Drag a task bar** left or right to shift its dates (preserves duration)
- A toast confirms the new dates with an **Undo** button

Mark a task complete, in-progress, or blocked

1. Click the task
2. Change the **Status** dropdown
3. If status is **blocked** or **on-hold**, a "Blocking reason" field appears — fill it in so teammates know why

Delete a task

1. Click the task → **Delete** button
2. A toast appears with an **Undo** button (6-second window)
3. After 6 seconds the delete is permanent (but still recoverable via the audit log for admins)

Capture a baseline

Requires **EDIT** *or* **MANAGE**

1. Open a villa → **Baselines** tab
2. Click **Capture New Baseline**
3. Give it a name ("Initial Schedule", "Revised Plan v2")
4. Optionally add notes
5. Click **Save**

Baselines are read-only snapshots. Compare any two later to see what changed.

Import tasks from CSV / Excel

Requires **MANAGE** *permission*

1. Click **Import** (top-right, visible only if you have manage)
2. Choose **By Phase**, **By Villa**, or **WL Master Schedule** mode
3. Upload the file
4. Map columns if prompted
5. Preview → Import

Export data

Requires **MANAGE** *permission*

1. Click **Export** (top-right)
2. A JSON backup file downloads
3. Every export is logged to the audit trail automatically

Request or approve an approval

1. Any user can **request** an approval from a task's panel

2. Users with **APPROVE** permission (Pavan, Chetan, Vandana) see the Approvals tab with pending items
3. Approve or reject with a comment

View the audit log

Requires ***MANAGE*** *permission*

1. Click the 📋 **Audit Log** button (top-right)
2. See the last 500 actions: who changed what, when

5 Who can do what

Permission	What it unlocks
VIEW	Read all villas, tasks, reports. No editing buttons.
EDIT	Add, edit, delete tasks. Drag Gantt bars. Update progress.
APPROVE	See Approvals panel. Approve or reject requests.
MANAGE	Create new villas, Import, Export, Add Development, see Audit Log, open the ⚙ Manage panel.

Permissions are independent — a user can have any combination.

Current team roster

Name	Role	Permissions
Admin	Administrator	all
Vandana P	Project Manager	edit, approve, manage
Praveer C	Planner	edit, manage
Vaishali P	Project Manager	edit, manage
Shraddha B	Project Manager	edit, manage
Dinesh	Project Manager	edit, manage
Madhavarajan S	Project Manager	manage
Pavan	Project Manager	approve
Chetan	Project Manager	approve
Stanly John	Project Manager	view
Product Analyst	Analyst	view

Anyone else from `@whitelotusgroup.in` who signs in via Google gets **edit** access automatically. Contact Vandana if you need elevated permissions.

6 Working together

Auto-save and conflicts

- Every change you make auto-saves every ~1.5 seconds
- Other team members see your changes on reload or next save
- If two people edit the same villa at the same time, whoever saves second sees: "*Another user saved changes after you last synced — reload to see the latest, then retry your edit*"
- Click **Reload** — your unsaved change needs to be redone, but nobody's work is silently lost

Offline or bad network

- If the connection drops, a yellow banner appears: "*Your changes aren't syncing to the server. Retrying…*"
- The app retries automatically every 5 seconds
- If saves keep failing for 30+ seconds, the banner turns red and asks you to stop editing until the connection returns
- Click **Retry now** to force a retry, or **Reload** to start fresh

What's logged

Every create, edit, delete, reschedule, import, export, and approval is logged to the audit trail with your name and timestamp. Admins can review the log at any time via the 📋 Audit Log button.

7 Keyboard and mouse shortcuts

Action	Shortcut
Save task modal	**Enter** (inside a text field)
Cancel modal	**Escape**
Quick-edit (WBS)	Click a task cell
Reschedule on Gantt	Drag the bar
Zoom Gantt	Zoom dropdown (Week / Month / Quarter)
Hard-reload (fixes most display bugs)	**Cmd+Shift+R** (Mac) · **Ctrl+Shift+R** (Win)
Open DevTools console (for bug reports)	**Cmd+Option+J** (Mac) · **F12** (Win)

8 Complete feature list

A full inventory of what Chanakya can do today. Features marked *admin-only* require **MANAGE** permission.

Multi-development structure

- Multiple developments (Amanvana, Kandhavara, and any you add)
- Per-development villa cards with progress, phase, risk indicators
- Development-level stats: total units, on track, at risk
- "View All Developments" cross-development roll-up
- Add new developments *(admin-only)*

Villa / project management

- Create, edit, delete villas *(admin-only)*
- Status tracking: on-track · at-risk · delayed · on-hold
- Auto-computed progress from tasks
- Per-villa contractor, PM, SS assignment
- Budget, plot area, notes fields
- Status badge tooltips explaining how status was derived
- Copy villa task structure from one villa to another

Task management

- Full CRUD with 6-second undo on delete
- Fields: name, dates, status, progress, priority, assignee, cost, constraint type, inspection required, milestone flag, blocking reason, notes
- Phase / subphase grouping with collapsible sections
- Bulk selection and multi-task actions
- Drag to reschedule on the Gantt (preserves duration)
- Predecessor dependencies: FS, SS, FF, SF with lag / lead
- Auto-computed parent group dates and progress

Gantt chart

- Zoom: Week · Month · Quarter
- Dependency arrows between tasks
- Critical path highlighting
- Critical-only and milestones-only filters
- Baseline overlay (compare current vs captured plan)
- Drag-to-reschedule with undo
- Print Gantt to styled PDF via the browser
- Rendered for 200+ task projects with debounce

Work Breakdown Structure (WBS)

- Collapsible phase / subphase tree
- Sortable columns
- Persistent filters for quick search (status, phase, assignee)
- Field validation with red-highlight and shake animation
- Status dropdown with explanatory tooltips

Baselines

- Capture a snapshot of the current schedule any time
- Multiple baselines per villa
- Delete baselines (with confirmation)
- Compare two baselines side-by-side with variance
- Baseline overlay on the Gantt

Critical path analysis

- Automatic critical path computation from predecessors
- Dedicated Critical Path tab
- Total float / slack shown per task
- Critical tasks highlighted in red on Gantt

Approvals workflow

- Request approval from any task's panel
- Approvals queue for approvers
- Approve or reject with a comment
- Approval status shown on the task

Resources

- Team roster with role, email, phone, hourly rate, availability
- Work vs material resource types
- Per-resource colour coding on Gantt

Planner

- Weekly and monthly views
- Drag-and-drop task assignment
- Per-week load visibility
- State persists across sessions

Today's Tasks panel

- Tasks due today across every villa
- Tomorrow's Tasks preview
- Upcoming Tasks horizon
- Inline quick-edit popup
- Progress bar and save indicator

Reports

- Daily, weekly, monthly progress reports
- CSV export per view
- Full JSON backup / import
- Printable report window

Site Plan (Amanvana)

- Live interactive villa master plan
- Status colour-coding per villa
- Reads live data from parent Store

Costs tracking

- Villa-level budget vs actual
- Per-task cost entry
- Contingency percentage
- Currency select (INR / USD / EUR / GBP)

Calendar view

- Tasks plotted on a monthly calendar grid
- Colour-coded by status
- Click any day to see tasks on that date

Data import

- CSV and Excel upload
- Three modes: By Phase, By Villa, WL Master Schedule
- Column mapper with preview
- Optional dependency-mapping upload
- Safe restore / rollback pane
- *Admin-only*

Audit log

- Every create, edit, delete, reschedule, import, export, login, approval logged automatically
- User name, action, entity, timestamp on every row
- Last 500 entries displayed; older rolls off
- *Admin-only viewer*

Security & authentication

- JWT-based auth (7-day session, 15-min expiry warning)
- bcrypt password hashing
- Google Sign-In with domain allowlist (@whitelotusgroup.in auto-provisioned)
- Role-based permissions: view · edit · approve · manage
- Rate-limited login (30 per IP, 10 per email per 15 min) to blunt brute-force
- XSS input filter on all user-entered names
- Payload shape validation on every save
- HTTPS-only (via Render)

Reliability & resilience

- Auto-save every 1.5 seconds with optimistic locking (409 conflict detection → no silent data loss)
- Offline banner with automatic retry every 5 seconds
- Critical "stop editing" warning if offline for 30+ seconds
- Boot-failure canary overlay catches any load issue and offers a clean reload
- 4-layer pre-deploy smoke test: blocks broken code from reaching production
- Audit trail means any delete is recoverable

UX polish

- Warm brown-and-gold design system (White Lotus brand-aligned)
- Toast notifications with undo for destructive actions
- Real-time field validation with visual feedback
- Status-badge tooltips explaining how each status was derived
- Persistent WBS filters across tab switches
- Keyboard-friendly modals (Enter to save, Escape to cancel)
- Smooth transitions between screens

9 Troubleshooting

"I can't log in"

- Double-check you're at `https://chanakya-pm.onrender.com`
- Try Google sign-in if password fails
- If you see "Chanakya couldn't finish loading", click **Reload app**. If it keeps happening, send a screenshot to Vandana.

"Everything looks broken / raw code on screen"

Hard-reload (**Cmd+Shift+R** on Mac, **Ctrl+Shift+R** on Windows). That clears the cached version. If still broken, report to Vandana.

"The screen keeps saying 'Another user saved'"

Someone else is editing the same villa. Click **Reload**, then redo your edit. If this happens repeatedly, coordinate with the other person in Slack to avoid stepping on each other's changes.

"I don't see the ⚙ Manage / Import / + New Villa buttons"

You don't have MANAGE permission. That's expected for most users. Ask Vandana if you need it.

"Gantt chart is slow"

Try switching the zoom from **Week** to **Month** or **Quarter** — fewer columns means faster rendering.

"I accidentally deleted something"

If within the last 6 seconds, the toast has an **Undo** button. If longer, ping Vandana — she can restore from the audit log.

10 Known limitations

These are on the roadmap but not built yet:

- **Mobile and tablet layout** — desktop / laptop only for now
- **Password self-reset** — email Vandana if you forget yours
- **Photo / document attachments on tasks** — use shared drive or email for now
- **Realtime live updates** — you see other people's changes on reload or next save, not instantly. Usually no more than a couple of seconds' delay.
- **Bulk task editing** — one task at a time for most fields (except Gantt drag for date shifts)

11 Support and escalation

Issue	Contact
Can't sign in	Vandana P
Need edit / approve / manage permission	Vandana P
Found a bug	Vandana P — include a screenshot and DevTools Console output (**Cmd+Option+J** → Console tab)
Lost data or accidental deletion	Vandana P
Feature request	Vandana P

12 Daily cheat sheet

Chanakya PM — Daily cheat sheet

Sign in	chanakya-pm.onrender.com → Sign in with Google (work email)
Pick development	Amanvana · Kandhavara · View All
Switch development	Click ← badge next to Chanakya logo
Add a task	Villa → WBS → + Add Task
Edit a task	Click the task row → edit fields → auto-saves
Reschedule	Gantt → drag the bar left or right
Undo a delete	Click Undo in the toast (6-second window)
Capture baseline	Baselines tab → Capture New Baseline
Sign out	Top-right → Sign out
Save conflict?	Click "Reload" in the banner, redo your edit
Anything stuck?	Hard-reload (Cmd+Shift+R), then message Vandana
